Product description:

KINDERLAND Emsland Spielgeräte

- Version: primed, painted, stainless steel
- Painting according to standard colors (indication of the RAL color when ordering)
- Platform as angle steel construction with outer boundary ring made of stainless steel
- Bearing on a 90 mm center axle with one axial and three radial ball bearings
- Floor made of aluminum checker plate
- ground-level installation with stainless steel outer edge
- Galvanized or stainless steel screws
- Fall protection in the impact area according to DIN EN/EN 1176 for a fall height of at least 1.00m, e.g. topsoil, lawn, synthetic fall protection also possible
- Outer diameter approx. 2.30 m
- Total height approx. 0.85 m
- centered with a stainless steel handwheel, mechanically polished, for self-propelling
- painted stainless steel column cover
- with 3 brackets on the platform

Because this item has a forced movement special requirements to the safety area and surfacing (depending on falling height, but min. suited for 1,0 m) needs to be taken into consideration. Safety areas aren't allowed to overlap with other play equipment.
